

Kaspersky®

Small Office Security

**Looks after your security
so you can look after your business**

The Internet, email and other forms of electronic communications have become a core part of daily life for every business. Viruses that were once an annoyance have given way to complex blends of malicious code specifically designed to steal information, otherwise known as 'crimeware': malicious code created for the purpose of making money illegally. Criminal organisations focus on harvesting enough personal information to steal people's identities, and they do this over the Internet. Their primary target is the data companies keep on their customers. It often contains bank or credit card details.

If your business uses the Internet, then you need Kaspersky® Small Office Security. Hourly updates and the security industry's highest detection rates keep you safe online and ensure that emails and online content remain malware free, maintaining the integrity of your valuable and sensitive data.

Key Benefits

- Award-winning protection against all online threats, hackers & spam
- Ensures the integrity of valuable & sensitive data
- Scales as your business grows
- Minimum impact on system performance
- Quick & simple to install; easy to use
- Designed with the small office in mind
- Security updates every hour to protect against new threats
- Antivirus, antispyware, firewall, application control, proactive defence, intrusion prevention

Why Choose Kaspersky® Small Office Security

Kaspersky Lab has long been the expert's choice for superior protection technology. And now there is a version created with your small office in mind. Fast and easy installation, with sensible defaults that let you protect all your systems effortlessly, giving you the peace of mind to focus on running your business - without worrying about security.

Restoring Your Systems And Your Data

Kaspersky® Small Office Security constantly monitors for suspicious behaviour. Once malicious behaviour is detected the process is blocked and any changes made by the malicious code are rolled back. Your system is clean and your original data intact.

Additional Features

- Proactive protection from even the newest malicious programs
- Automatically protects your email and web traffic
- Personal firewall with intrusion detection and prevention to keep out hackers and the tools they use
- Security when working on any type of network, including Wi-Fi hotspots
- Self-defence technology stops malicious programs disabling your antivirus solution
- Quarantine storage of suspicious objects
- Automatic hourly updating of threat protection

Using The Internet For Business – With Confidence

The solution continuously analyses web pages and blocks malicious content, as well as pop-ups and adverts, all of which are common tools used by cybercriminals to get their code onto your systems. This code can give the criminal direct access to your system and your network to steal information, or to use your email systems to send out spam or malicious email. Such emails coming from your business could affect your reputation, and may see all your company email flagged as spam or worse.

The protection offered extends beyond the Internet to protect against threats from any source: USB sticks brought in from home or by contractors; CDs burnt off the premises or sent in by customers or suppliers; memory cards and other devices. Even MP3 players can pose a threat; they can be infected with malicious code which will automatically start when the MP3 player is connected to a computer.

Which Pack To Choose

5 PCs + 1 File Server: Allows you to protect up to 5 Windows PCs / workstations / laptops and protect the data stored on your file server. See the systems requirements below for supported operating systems and minimum system specifications.

+5 PCs Additional Users Expansion Pack: A cost effective way to add protection for an additional 5 PCs / workstations / laptops.
